# YAKSHA HEALTH APP WITH JAVACRIPT AND CYPRESS

# **Usecase summary**

Project Name: healthapp.yaksha app - Medical Record Management System

Use Case Summary: healthapp.yaksha is a healthcare application designed to manage Electronic Medical Records (EMR). it allows users to view, search, and manage patient records. It features functionality such as adding/editing patient records, filtering data by doctor and department, and exporting records. The primary use case is to automate the process of medical record management, ensuring efficient and reliable operations for healthcare providers.

## **Technology Stack:**

• Automation Tool: Cypress (for testing)

#### **Key Features:**

- Patient Record Management: Add, edit, and delete patient records.
- **Filtering and Search:** Search medical records by date range, doctor, department, and more.
- **Export Functionality:** Export records for offline access.

### **Expected Outcomes:**

- Automate key healthcare operations like patient record handling, filtering, and validation.
- Ensure the accurate retrieval and modification of medical records, enhancing operational efficiency.

## Overview of the application

Pages/Features that are to be focused for the application

Please use the Application URL <a href="https://healthapp.yaksha.com">https://healthapp.yaksha.com</a>

## **PROBLEM STATEMENT**

Need to automate the following activities using cypress+javascript

You will be given few Json files in fixtures folder like PatientName.json and ValidLogin.json.

Path	File	Description
fixtures	PatientName.json ValidLogin.json	Contains data to read from json file.
PageObject\Pages	<ul> <li>AdminPage</li> <li>AppointmentPage</li> <li>DispensaryPage</li> <li>DoctorPage</li> <li>IncentivePage</li> <li>LaboratoryPage</li> </ul>	<ol> <li>All core activities to be performed here.</li> <li>The comments associated with each templated method here describe the expectation.</li> <li>Declare any variable/object you</li> </ol>

<ul> <li>LoginPage</li> <li>OperationTheaterPage</li> <li>PatientPage</li> <li>ProcurementPage</li> </ul>	need to share data/status between different methods. 4. Do not modify the signature of methods declared here.
---	---

# Here's a detailed table format for the test cases to be tested

Test Case No.	Test Case Name	Test Steps to be performed	Path & Method Used	Expected Result
	Verify Login with Valid Credentials	3. Perform login method will perform authentication with the username and password.	Reference path \PageObject\Pages \LoginPage methods performLogin()	Successfully logs in with provided credentials. The user is logged in the admin page.
		It is must to implement this login functionality at first and then implement any other test case.		
	Verify the presence of	3. Select any counter, if it's not selected	Reference path	
1	Visit Type drop down by selecting	Booking List" tab.  4. Select "New Patient" from "Visit Type" drondown	PageObject\Pages\AppointmentPa ge	The "Visit Type" column in list should contain only patients of "New" category.
	"New patient" option	5. Pick "01-01-2024" in "From Date" field	methods verifyVisitTypeDropdown()	
		1. Navigate to Operation theatre page. 2. Use handleOtBookingAlert() to handle the alert.	Reference path	
2	Handle Alert for OT Booking Without Patient Selection	5. Without entering any details, within the modal, click on the "Add New OT"	\ PageObject\Pages\ <b>OperationThea</b> trePage methods	1. An alert with the message "Patient not Selected! Please Select the patient first!" is displayed. 2. Handle and accept the alert to proceed.
	0.0000.011	Dutton.  6. Handle the alert with message	handleOtBookingAlert()	p. 00000.
	Verify Patient Overview Page	Use verifyPatientOverview().     Read data from PatientName.json file	Reference path	
3	Displays Information Correctly	for any one patient name. 3. Goto "Doctor" module, then "In Patient	\PageObject\Pages \ <b>DoctorPage</b> methods	

Test Case No.	Test Case Name	Test Steps to be performed	Path & Method Used	Expected Result
		4. In the search bar, enter the patient name read from patientName.json file and perform the search. 5. Locate the patient in the results and click on the "Preview" icon under the Actions column.		Verify the same patient overview page is displayed with the same patient's name.
4	Add Progress Note for In Patient	4. Locate the patient in the results and click on the "Preview" icon under the Actions column.  5. Click on "Notes" section available on left side of the panel below Profile	\PageObject\Pages \ <b>DoctorPage</b> methods	The method should successfully add a Progress Note for the patient, and a success confirmation message with the text "Progress Note Template added." should be displayed.
5	Add and Verify New Currency in Settings	<ol> <li>Navigate to Procurement &gt; Settings.</li> <li>Select "Currency" sub tab.</li> <li>Click "Add Currency" button.</li> <li>Add any data in "Currency Code" and</li> </ol>		The new currency should be added successfully and displayed in the table with the correct currency code and description.
6	Verify export to "User collection report"	2. Click on "Reports" tab. 3. Click on "User Collection Report". 4. Select from date as 01-01-2020. 5. Click on "Show Report" button	Reference path \PageObject\Pages\DispensaryPa ge	The exported file should download with the name "PharmacyUserwiseCollectionRepor t_2025".
7	Verify Navigation to User Profile Page	1. Navigate to Homepage i.e https://healthapp.yaksha.com/Home/In		Verify that the user is redirected to the page where "User Profile" heading is present.
8	Verify Patient Profile Picture Upload	<ol> <li>Navigate to Patient module.</li> <li>Select "Register Patient" tab.</li> <li>Select "Profile Picture" tab (camera icon).</li> <li>Click on the "New Photo" button.</li> <li>Upload an image present in TestImage folder and click on the "Done" button.</li> </ol>	Reference path \PageObject\Pages\PatientPage	Verify that the uploaded image is displayed successfully in the patient's profile.

Test Case No.	Test Case Name	Test Steps to be performed	Path & Method Used	Expected Result
9	3	the located row.  4. In the "Edit TDS Percent" modal, enter the updated TDS% value.  5. Click on the "Updated TDS" button.  6. Verify that the updated TDS% value is	methods	The updated TDS% value is displayed correctly in the corresponding row of the table.
10	Verify the tooltip text on hover of Star icon in Laboratory	Navigate to Laboratory module.     Hovers over star icon and waits for tooltip to appear.     Verifies the visibility of the star icon and retrieves the tooltip text.	AboratoryPage	Verifies the visibility of the star icon and retrieves the tooltip text. Result should be "Remember this date".

Learners will gain experience in building strongly-typed applications using React.js and managing data flow with **JavaScript**. They'll learn how to define interfaces, use types for error prevention, and improve code maintainability.

With Cypress, learners will learn to write and execute automated tests for the <a href="https://healthapp.yaksha.com">https://healthapp.yaksha.com</a>

app. Key skills include:

- **Browser Automation**: Interacting with web elements and testing multiple browsers.
- Assertions & Validations: Ensuring app behaviour meets expected results.
- End-to-End Testing: Automating real user interactions and validating overall app functionality.

# IMPLEMENTATION/FUNCTIONAL REQUIREMENT

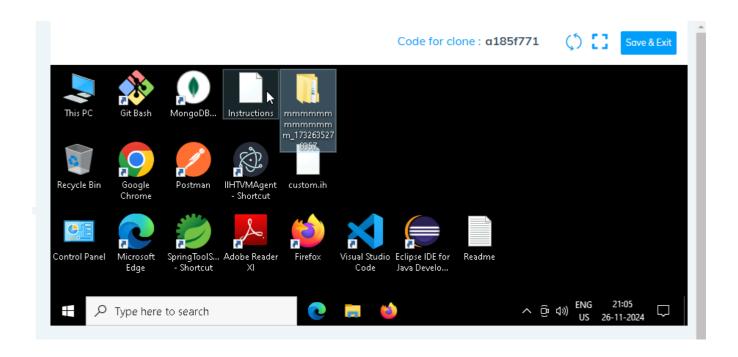

## 1.1 CODE QUALITY/OPTIMIZATIONS

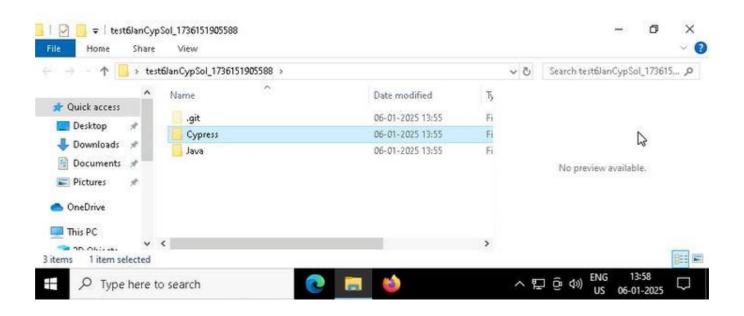

- 1. Associates should have written clean code that is readable.
- 2. Associates need to follow SOLID programming principles.

### **Execution Steps:**

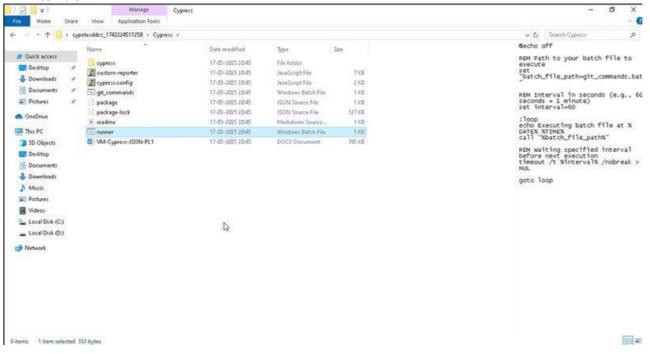

#### **Steps for Execution:**

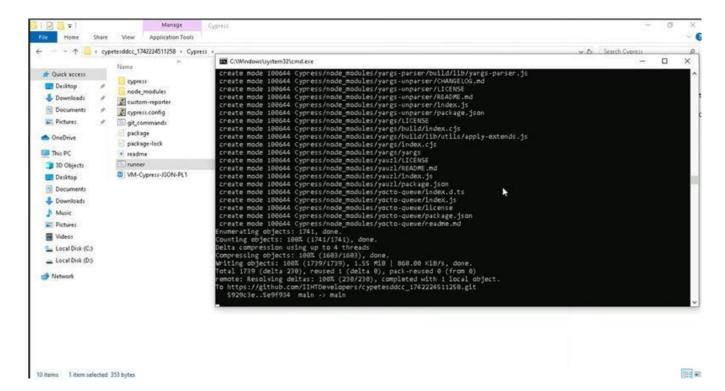

1. Please open the folder created on desktop with the email name you used to login.

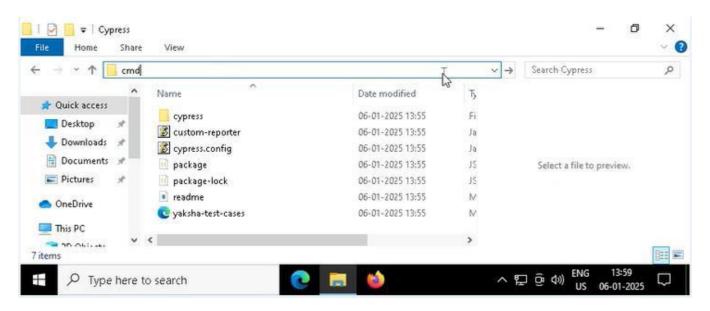

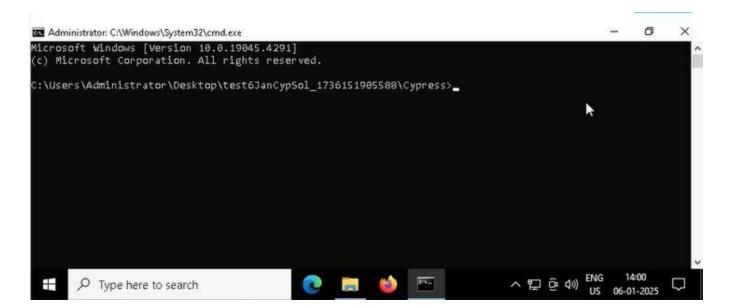

2. Go into the Cypress folder and execute this "runner" file. This will keep pushing the code at regular intervals.

3. Open command prompt with its location using "cmd" in search bar:

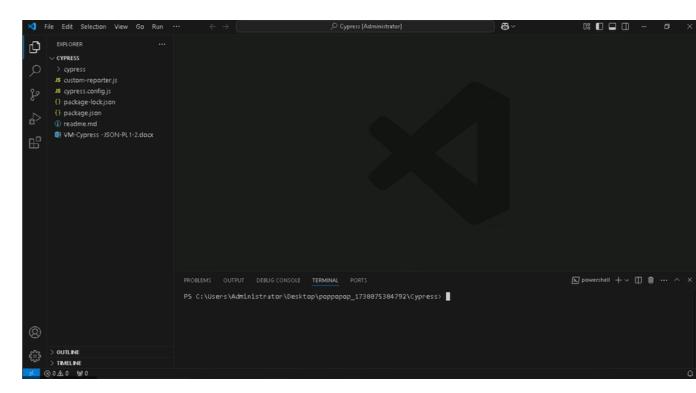

4. Open VS Code through cmd using below command:

code.

1. Once VsCode is open. Please open the terminal in Cypress folder and execute below given next commands:

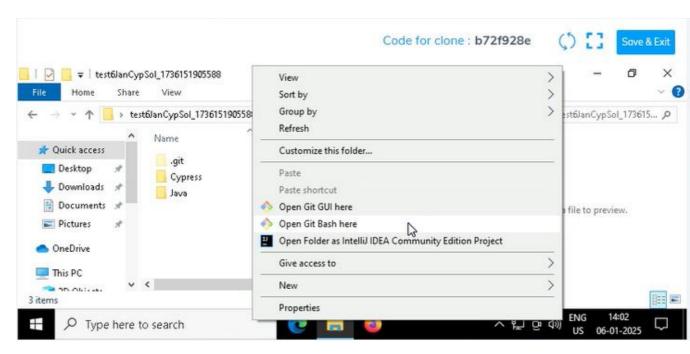

Install all dependencies in the Cypress folder path using:
 npm install

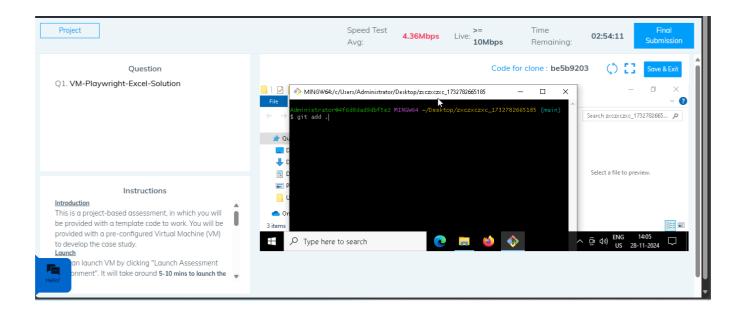

- 2. Run the following command to open the interactive Cypress Test Runner in the Cypress folder path:

  npx cypress open
- 3. Run the following command to run test cases in headless mode in the Cypress folder path:

  npx cypress run
- 4. Once you have executed the test cases. Now it is necessary to push your code to git. For this, please go inside the folder created on desktop with the email id you have used to login and then:
  - 1. Open gitbash

2. Add all files

## 3. Commit the changes

## 4. Push the changes
